

## PROTRAC™ Over-the-Tire Rubber and Manganese Tracks

PROTRAC™ distributed by BLS Enterprises, Inc., is the industry's most advanced, over-the-tire track system for skid steers. With PROTRAC™, you have the right shoes for any job. PROTRAC™ tracks use bolt-on replaceable / interchangeable shoes (pads) that are also fully rebuildable, thus paying for themselves with low cost maintenance. PROTRAC™ helps you where it counts the most. You can cross pavement without leaving a scratch, get out of ditches with a fully loaded bucket, work in sand without sinking, push dirt uphill, and easily travel over mud.

PROTRAC™ for skid steers is designed and built to the highest quality standards. The strongest materials have been selected for each element of the track. PROTRAC™ is the first and only skid steer track on the market to use heat treated, forged Chromium steel pins and links for unsurpassed resistance to wear. This process guarantees exceptional hardness and break-resistance.

PROTRAC™ is engineered to achieve the best possible union between machine and track. The base is designed to fit the skid steer tire to perfection- providing maximum grip without damaging the tire. A variety of rubber and manganese shoes will get you where no other skid steer has gone before. You have the choice to put on the right shoes for your job without the need to buy another track system. The PROTRAC™ Rubber Track System will give you the maximum protection when you must work on delicate surfaces like asphalt, concrete, or even grass. The PROTRAC™ Magnum Track System offers unparalleled traction in muddy, swampy, or wet conditions.

**PROTRAC™** - Where No Skid Steer Has Worked Before

- Increased Flotation
- Better Traction
- No Tire to Track Slipping
- Less Ground Damage
- Maximum Wear Resistance
- Easily Rebuildable
- Variety of Interchangeable Shoes
  - Manganese or Rubber Options
- Eliminates Skid Steer Bouncing

## PROTRAC™ Over-The-Tire Tracks for Skid Steers

BLS Enterprises, Inc., known internationally for its 20 years of success manufacturing polyurethane TUFPADS® track pads, is now a distributor for the PROTRAC™ over-the-tire track system for rubber tire skid steer loaders. These innovative tracks are available with manganese shoes for increased traction and flotation (PROTRAC™ Magnum), with rubber shoes for increased protection of delicate surfaces (PROTRAC™ Rubber), or as strong economical manganese diamond shaped crossbars (PROTRAC™ Diamond). For years, people who needed to buy small loaders have had a difficult decision to make. Rubber tire skid steer machines have several advantages, principally maneuverability and speed. Track loaders have other advantages, mainly great traction and flotation in wet, swampy, or sandy environments. Until recently, the buyer had to make a decision between one or the other type of loader (unless he could afford to buy two machines). Now, with the PROTRAC™ over-the-tire track system, the contractor can have it both ways with one machine!

### Brilliantly Engineered

PROTRAC™ is a brilliantly engineered product that has all the bases covered. Owners of rubber tire skid steer loaders can now enjoy the great traction and flotation that they could formerly get only with track loaders. Versatility is certainly a factor to be considered, but durability is every bit as important. PROTRAC™ has been engineered to be the last track system you will ever need to buy. This unique track system is composed of pins, links, and shoes manufactured with Chromium, which makes it very hard and break resistant. Of course, we know that nothing lasts forever, and if a part ever breaks, you can feel secure in the knowledge that you can order any part, install it, and you are up and running again. You will never have to replace the entire track because the track is fully rebuildable.

PROTRAC™ Magnum Track Works Great in Its Native Element-Mud

PROTRAC™ Rubber Tracks Increase Traction and Flotation

### Best Fit

Another factor to consider is - how well will it fit? PROTRAC™ has been engineered to be the best fitting track on the market. It will fit your existing skid steer tires to perfection, with no slipping or damage to the tire. The durable steel base comes in two different sizes to fit 10-inch and 12-inch wide tires. Fourteen inch is available for Diamond only.

PROTRAC™ Rubber Track Protects Delicate Surfaces

### All-Terrain Capability

The PROTRAC™ Magnum Track System is recommended for harsh conditions like land clearing, demolition sites, dirt work and any place where traction and flotation are critical. These super-strong manganese shoes have a defined lug pattern which allows your skid steer to be able to work in terrain conditions that you would have never thought possible. The contoured, double-tapered shoe will not harm pavement when making gentle turns and is specially designed with outstanding flotation characteristics.

### Protective Tracks

If protection of delicate surfaces is your prime consideration, the PROTRAC™ Rubber Track System is what you need. This heavy-duty rubber shoe has a defined lug pattern, is reinforced with steel, and allows the skid steer to travel freely over hard finished surfaces, such as concrete or asphalt roads, driveways, sidewalks, without causing damage. The rubber shoes also work great in gardens, and the tapered edges protect against damage to grass and fine lawns, and permit easy turning. PROTRAC™ Magnum and PROTRAC™ Rubber both use the four-bolt mounting system that makes it easy to replace or rebuild shoes.

# PROTRAC™ *Diamond*

Although the **PROTRAC™ *Diamond*** track is more economical to buy, and does not use interchangeable shoes, you still get great traction. The unique configuration of the diamond-shaped manganese cross bars prevents sliding of the skid steer even when you are driving sideways on a slope. **These tracks offer all the traction that you'll ever need.**

The **PROTRAC™ *Diamond*** over-the-tire skid steer track system is the solution for those in need of a general purpose or regular duty track. The diamond pattern bites into mud, clay, loose rock, sand and even snow and ice like no other type of track. The **PROTRAC™ *Diamond*** has equal or greater traction going forward or backward but the unique diamond configuration reduces sideslip, greatly improving productivity and safety on side slopes. The **PROTRAC™ *Diamond*** track is made from manganese steel alloy, not just cast iron or steel. This track also incorporates a link and pin system (which forms the chain) made from Chromium. These two materials ensure a light-weight track that is much stronger and longer lasting than any other track system in the same class.
