

Alternative Track Pads

POLY-MG POLYURETHANE TRACK PADS

Are you tired of your rubber track pads falling apart and having to replace them too soon? **BLS Enterprises, Inc.** has a medium grade polyurethane track pad, **BLS POLY-MG®** track pad, which will solve this problem while costing less than a premium polyurethane track pad. These **BLS POLY-MG®** track pads last longer than rubber and provide traction and surface protection. Unlike rubber, **BLS POLY-MG®** track pads wear more like polyurethane **TUFPADS®** track pads, as if they were being sanded down instead of chunking out like rubber pads. Machine owners that have used the **BLS POLY-MG®** track pads found great improvement over rubber and did not have to replace their track pads as often, saving them time and money. **BLS POLY-MG®** track pads are only available at **BLS Enterprises, Inc.**

Medium Grade Polyurethane, **BLS POLY-MG®** Bolt-On Track Pad

HIGH QUALITY RUBBER TRACK PADS

If you want rubber track pads, why not use high quality rubber? **BLS** offers high quality rubber track pads, **HQRPADS™**, that will increase your traction and protection of surfaces compared to steel tracks. **HQRPADS™** are more durable than most OEM supplied rubber tracks and will lengthen the time between purchasing replacement track pads. Being less expensive than polyurethane, **HQRPADS™** are a great alternative to rubber track pads or steel tracks.

Bolt-On Track Pad for Barber-Greene 265 Paver in High Quality Rubber

CUSTOMIZE HQRPADS™ RUBBER TRACK PADS FOR SINGLE GROUSERS

BLS has a wide variety of sizes of high quality rubber track pads that bolt on to single grouser shoes for excavators, dozers, and other steel tracked vehicles. **BLS** can customize the height of your rubber bolt-on pad to fit your single grouser shoe.

LOWER COST SOLUTION

For contractors and machine owners who are looking for a less expensive solution to providing quality track pads that provide increased traction and surface protection for their machines, **BLS Enterprises, Inc.** offers medium grade polyurethane **POLY-MG** and High Quality Rubber track pads (**HQRPADS**). These two types of pads are available at a lower cost than our premium polyurethane **TUFPADS®** track pads, while still providing increased traction and surface protection you can count on. Both **POLY-MG** and **HQRPADS** are available in a wide variety of styles and sizes to fit many track construction machines. These pads are perfect for the machine owner who is looking for dependable track pad protection at a reduced cost, or who only needs protective track pads for a short length of time for a particular project. Contact **BLS Enterprises** today for more information on these affordable track pads. A sales representative will be glad to help you find the perfect pad to reduce your costs today.

Backhoe Stabilizer Pads

BLS Enterprises, Inc. is always adding new depth to its already impressive line of high quality construction wear parts. They continue to expand upon their line of stabilizer/outrigger pads. BLS stabilizer pads are quickly replacing the pieces of discarded rubber tires bolted together that were formerly used by many machine owners. Many contractors are already using these stabilizer pads, as they have found them to be a much better value and far

more effective than the bolted rubber strips. Polyurethane or molded rubber stabilizer pads last many times longer than any stabilizer pad made with rubber strips, so contractors no longer need to waste valuable time and money on continuously replacing worn out pads. BLS polyurethane and rubber stabilizer pads are available in a wide variety of shapes and sizes for many different machines.

BLS Enterprises, Inc. produces stabilizer pads for the following rubber tire backhoes:

Case 580, 590 & 595

Caterpillar 416, 420, 426, 430 & 446

Daewoo

Dynahoe

Dynapac

Fermec

Ford 555 & 655

John Deere 70, 110, 211, 310, 410, 510 & 710

Kobelco

New Holland 555 & 655

Terex

Volvo EW-170

BLS can also customize stabilizer pads to fit your individual machine. *Just ask!*

THREE MATERIALS

BLS manufactures stabilizer pads in three different materials to fit your specific application. BLS's top of the line premium polyurethane stabilizer pads provide users with the longest wear possible. BLS also offers a medium grade polyurethane, **BLS POLY-MG®**, stabilizer pad that is less expensive than the premium but lasts longer than rubber. Stabilizer pads are also available in high quality rubber from BLS. To find out which material is right for you, contact **BLS Enterprises, Inc.** to talk to a knowledgeable representative.
